A. Absolute effect
B. Relative to baseline exit risk
Change in survival probability per SD of GPR × 10 provisions (pp)
Change in exit probability relative to the group's exit rate (%)

< $10k exit 31.3%
$10k–100k exit 12.7%
$100k–1M exit 4.3%
≥ $1M exit 1.1%
Lagged link value (t − 1) and the group's one-year exit rate
Pooled model, common fixed effects
Separate model per size group
